The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhou et al in view of Kobayashi et al (the article entitled "Renaissance of immobilized catalysts. New types of polymer-supported catalysts, "microencapsulated catalysts", which enable environmentally benign and powerful high-throughput organic synthesis"), Zhou et al disclose the production of hydrogen peroxide by reacting hydrogen and oxygen in the presence of a transition metal catalyst such as palladium (Paragraphs [0019] and [0059]), and teach in claim 10 that the catalyst may constitute zeolite encapsulated vanadium picolinate peroxo complexes. Kobayashi et al disclose in the Introduction that immobilized catalysts have been of great interest due to several advantages, such as simplification of product work-up, separation, isolation, and reuse of the catalyst, and state that chemical processes with little waste are expected using immobilized catalysts, because they can be recovered and reused. It would be obvious from Kobayashi et al to employ the catalyst of Zhou et al in the form of a micro-encapsulated catalyst, since Zhou et al recognize in claim 10 that the catalyst may be encapsulated, and one of ordinary skill in the art would be motivated to simplify the product work-up, separation, isolation, and reuse of the catalyst, as suggested by Kobayashi et al. One would also be motivated to operate a more environmentally benign chemical process, as also suggested by Kobayashi et al.
